PROFESSIONAL SUMMARY

I'm an AI engineer with over five years of experience building software people actually use. At Jotform, I work on AI Agents—conversational assistants that help automate form interactions, customer support, and workflows across chat, voice, and email for a platform used by more than 35 million people. I work across the stack, mainly with TypeScript and React on the front end, and Node.js and PHP on the back end. Outside of work, I keep building and exploring AI products.

EXPERIENCE

Senior Full Stack Developer, Jotform

Apr 2021 - Present

- Build Jotform's AI Agents — conversational assistants that automate form interactions, customer support and workflow triggers across chat, voice and embedded web — on a platform serving 35M+ users
- Spearheaded Copilot in the Form Builder, letting users generate a fully functional form from a single natural-language prompt, changing how new users start building
- Shipped the training and customization layer that lets customers tune agents to their own brand, conversation flow, data collection and automated actions
- Built the Gmail AI Agent end to end: secure OAuth integration with the Gmail API, plus agents that extract structured data, trigger workflows, reply automatically and create records from inbound mail
- Led front-end rebuilds of 3 flagship products — Inbox, PDF Editor and Form Builder — using React, Redux and Redux Saga, and built back-end services for authorizations and integrations in PHP with MySQL
- Drove accessibility to WCAG 2.2 and ARIA 1.2 compliance across multiple products, partnering with dedicated accessibility specialists
- Hardened security across products: remediated injection flaws, strengthened authentication, and defended against XSS and CSRF attacks
- Mentor junior engineers through pair and mob programming, and partner with UX, product and AI research teams to scope and release MVPs

Front End Developer Intern, Jotform

Jan 2021 - Mar 2021

- Developed an open source JavaScript library called Tagly which transforms input fields into tag components.
- Developed a resume generator application utilizing React and Jotform API

PROJECTS

Loam — AI Meditation & Sleep

[App Store](#) | withloam.app

- Designed, built and shipped a full AI wellness app to the iOS App Store — live since May 2026, with paying subscribers
- Built The Moment, which generates a personalized, fully-voiced meditation in ~60 seconds from a free-text feeling, pairing LLM script generation with ElevenLabs speech synthesis
- Built Sage, a realtime voice AI coach on LiveKit with streaming audio, barge-in handling and persistent session state
- Architected the backend on Cloudflare Workers (Hono) with D1, R2 and Drizzle ORM; custom JWT auth hardened with Apple App Attest
- Shipped monetization with RevenueCat — subscriptions plus consumable credit packs — and instrumented retention with PostHog
- Technologies used: React Native, Expo, TypeScript, Cloudflare Workers, D1, R2, ElevenLabs, LiveKit, RevenueCat

EDUCATION

Bachelor of Science - BS, Software Engineering, Atilim University

2016 - 2021

- GPA: 3.28/4.00

SKILLS

Technologies: AI Agents, Prompt Engineering, LLM Applications, ElevenLabs, LiveKit, React, React Native, Next.js, Expo, Redux Saga, Node.js, Cloudflare Workers (D1, R2), Tailwind CSS, Storybook, Playwright, WebSocket, MySQL
